

# Do Your Logistics Service Providers Have **Waste Disposal** Under Control?

1140 Valley Forge Rd.  
P.O. Box 810  
Valley Forge, PA 19482-0810

## Top-10 Findings

*Environmental Standards has discovered during years of assessing companies that handle your products that some issues occur more frequently than others. This is the tenth in a series highlighting our Top-10 Findings.*

### Finding #10: Waste Disposal

Auditors found:

- Inadequate waste-disposal training for site personnel
- Facility management unaware of disposal method of hazardous waste generated at the site
- Waste improperly labeled and stored on site
- Lack of documentation regarding the combination of specific products to existing waste streams
- No evaluation or audit of waste disposal contractor

### Are Your Products Handled Safely?

Engage Environmental Standards as your third-party auditor and we can answer that question for you. We have conducted hundreds of audits worldwide to assess both the quality of the product purity testing data generated and the health and safety practices and security measures associated with product shipping, transfer, and storage. We have successfully brought Fortune 500 chemical and industrial companies together into a business consortium to share audit costs for individual contractor facilities, which, in addition to saving dollars and time for consortium participants, also fosters good will with surveyor and logistics firms that are subjected to fewer audits.
